The first part of the paper is devoted to the
study of the properties of the

operator T defined by the formula

$$Tf(x) = \int_0^x f(t) dt$$

where f is a function of bounded variation.

It is shown that the operator T is

linear and bounded in the space of functions of bounded variation.

The norm of the operator T is found to be

$$\|T\| = 1$$

and it is shown that the operator T is not compact.
